Preserve to a Safe Space

The screenshots illustrate the 'Connect Your Space' feature in the Save app. They show the initial screen, the 'Private (WebDAV) Server' connection screen, the 'Internet Archive' connection screen, and a detailed view of the Internet Archive connection settings.

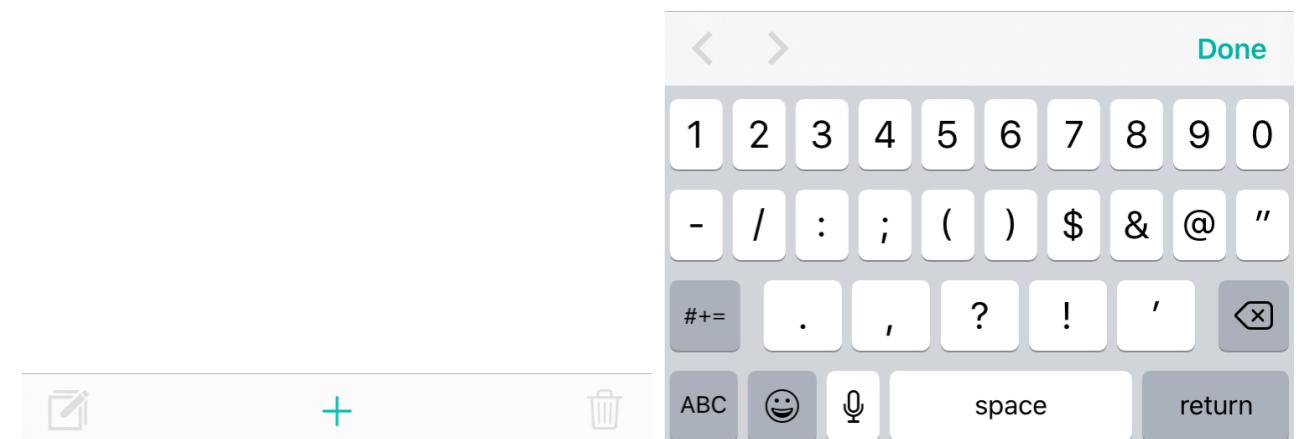

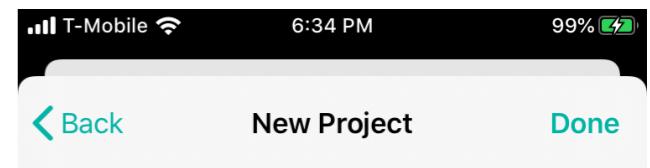

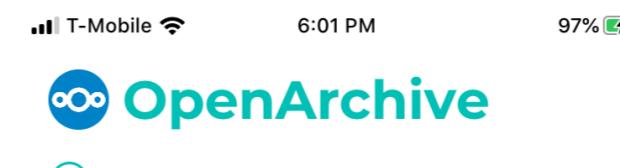

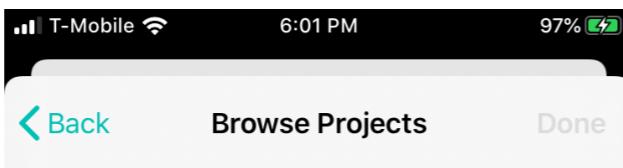

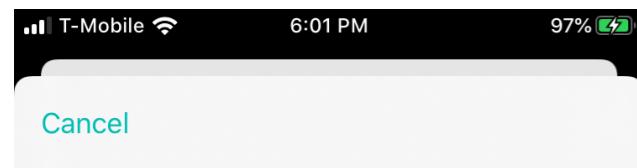

Initial Screen: Shows the 'Skip' button.

Private (WebDAV) Server: Shows fields for 'Server Name' (Optional), 'Server URL' (Required), 'User Name' (Required), and 'Password' (Required). A note states: 'Save connects to WebDAV-compatible servers only. (For example Nextcloud and ownCloud.)'. An 'Upload Chunking' toggle switch is shown, with a note: 'Only tested with latest Nextcloud! Increases reliability on bad networks. Will only upload as long as the device stays on and the app in the foreground. (Short excursions to other apps are ok, though.)'

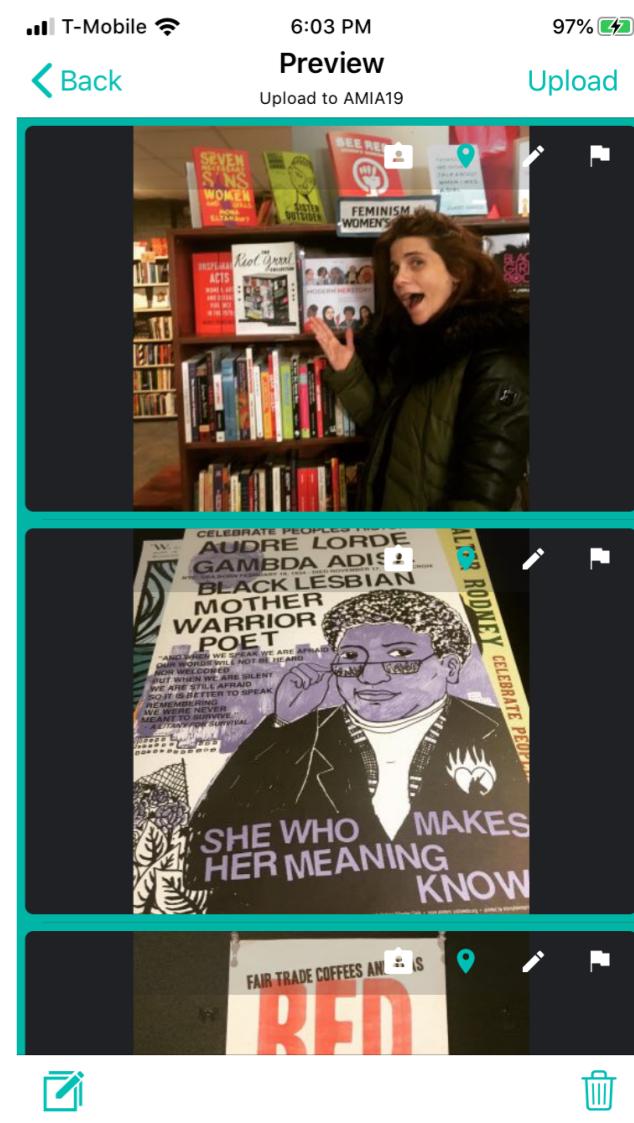

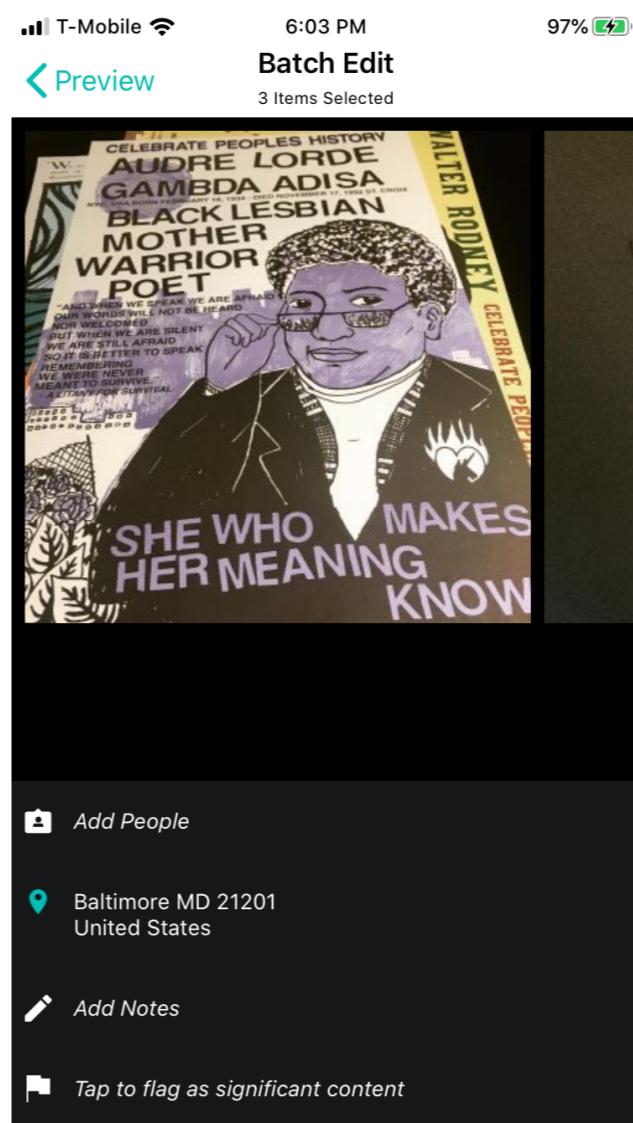

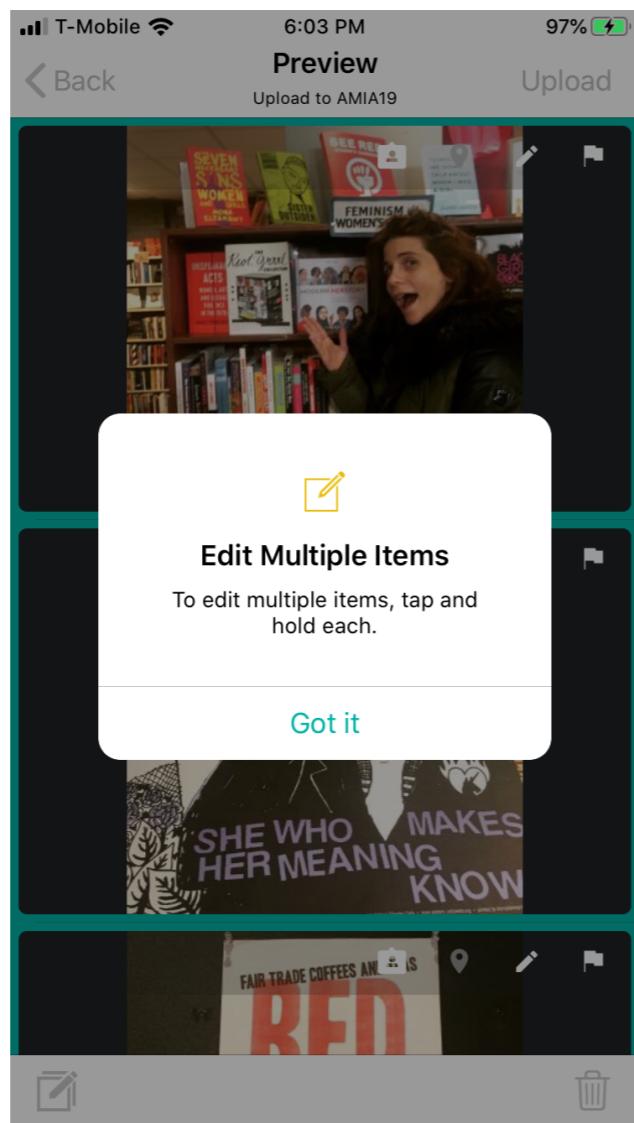

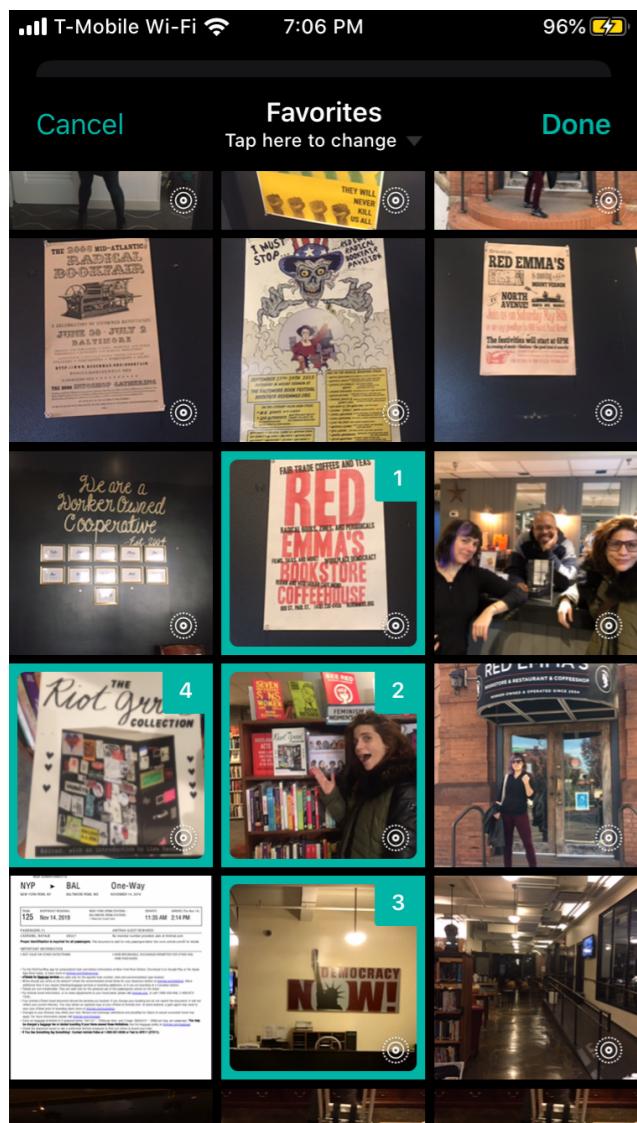

Internet Archive: Shows fields for 'Access Key' (Required) and 'Secret Key' (Required). A note states: 'Save needs your Internet Archive account's API keys to be able to upload to it.' Below this is a 'Got it' button and a note: 'When using the "Acquire Keys" feature, make sure to log in and then touch the "Refresh" button in the top right to let Save have another try at automatically scraping the keys.'

Internet Archive Detail: Shows fields for 'Access Key' (Required) and 'Secret Key' (Required). A note states: 'You can let Save try to acquire these keys automatically, or you can tap this row which will send you to https://archive.org/account/s3.php in Safari from where you can copy-and-paste these keys manually.'

Easily Access Server Files

The screenshot shows the Nextcloud web interface with the title "Files - Nextcloud". The URL in the address bar is <https://oademo.thegood.cloud/apps/files/?dir=/&fileid=58>. The sidebar on the left includes links for "All files", "Recent", "Favorites", "Shares", "Tags", and "External storages". A progress bar at the bottom indicates "1.6% of 25 GB used". The main area displays a list of files and folders:

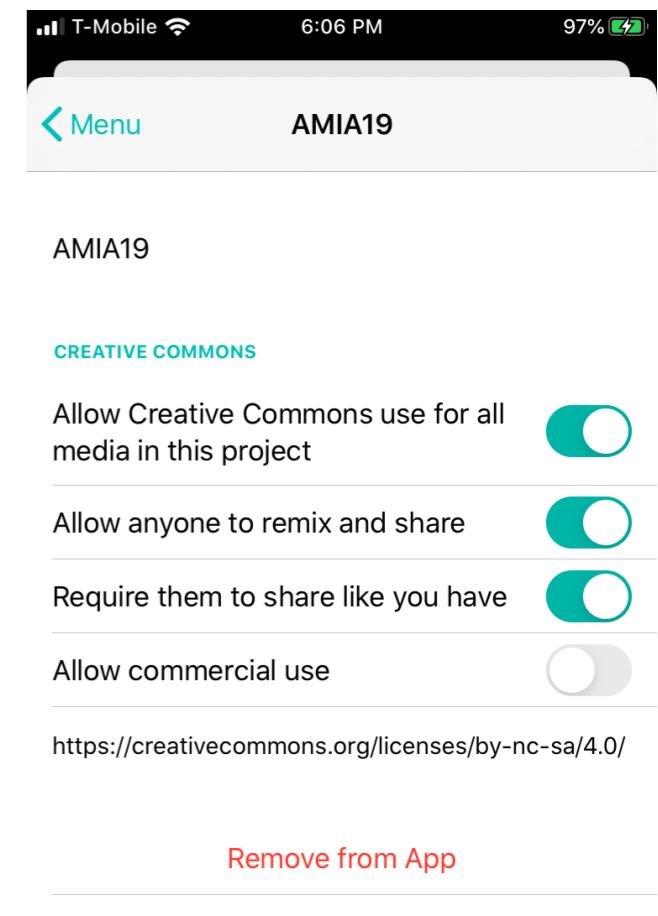

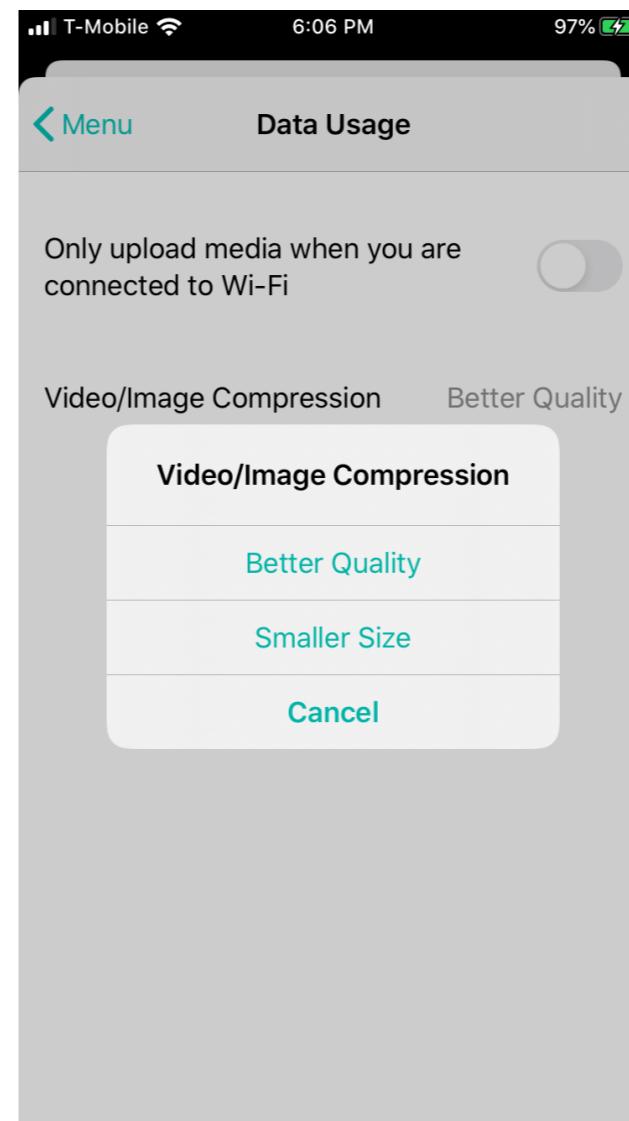

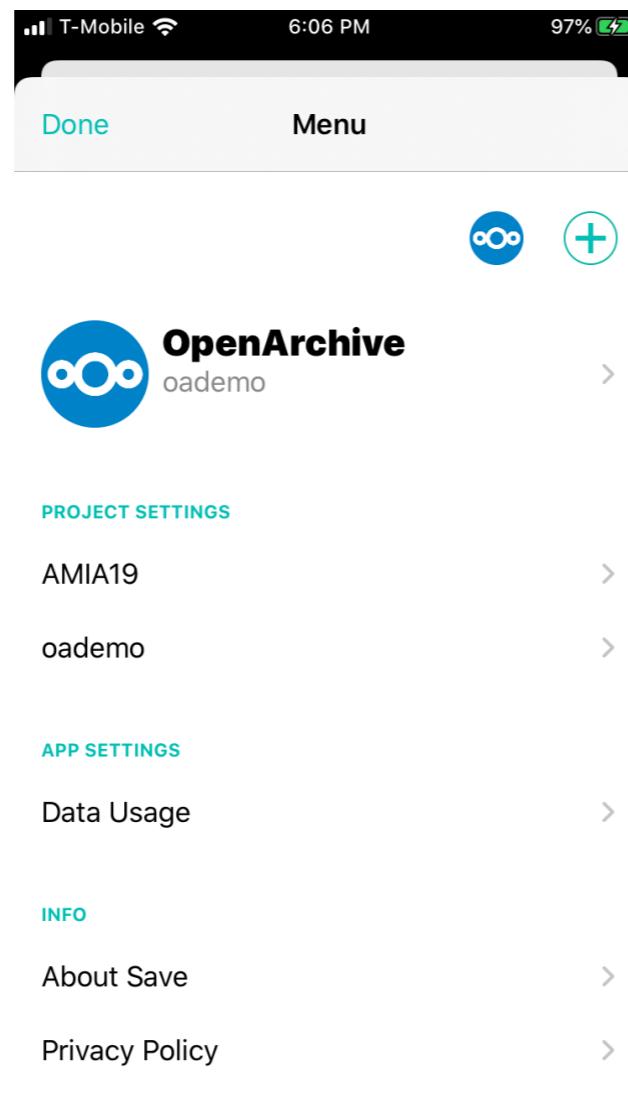

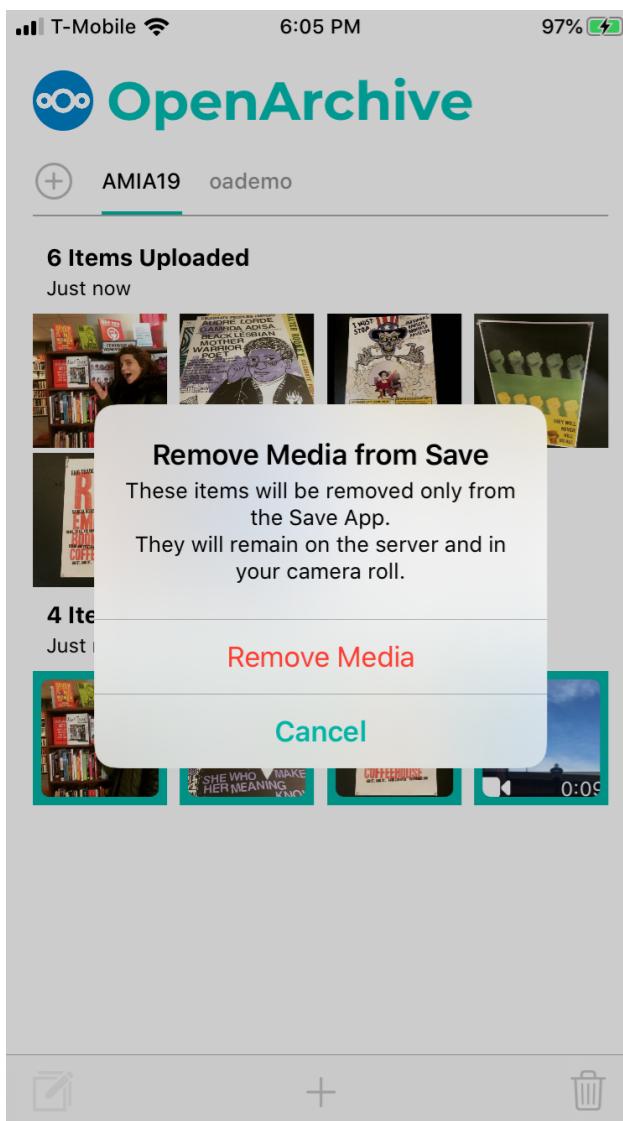

Name	Size	Modified

View Metadata Files & Significant Content Subfolders

The screenshot shows the Nextcloud web interface with the following details:

- Header:** Files - Nextcloud, URL: https://oademo.thegood.cloud/apps/files/?dir=/AMIA19/2019-11-16T12%3A28
- Sidebar:** All files, Recent, Favorites, Shares, Tags, External storages, Deleted files, 1.6% of 25 GB used, Settings.
- Breadcrumbs:** AMIA19 > 2019-11-16T12:28:12GMT-05:00
- Table Headers:** Name, Size, Modified
- Content:** A folder named "Significant Content" (357 KB, 3 minutes ago). Below it are several files and their corresponding metadata files:
 - 81B6FBF3-DD1E-43EF-9D63-CB059E2984B4.jpeg (521 KB, 4 minutes ago)
 - 81B6FBF3-DD1E-43EF-9D63-CB059E2984B4.jpeg.meta.json (less than 1 KB, 4 minutes ago)
 - 7403A3BB-3661-4F17-9B60-BE5D5E233858.jpeg (591 KB, 4 minutes ago)
 - 7403A3BB-3661-4F17-9B60-BE5D5E233858.jpeg.meta.json (less than 1 KB, 4 minutes ago)
 - A0A1B094-7002-48DE-A654-DCDC6AB8F311.jpeg (309 KB, 4 minutes ago)
 - A0A1B094-7002-48DE-A654-DCDC6AB8F311.jpeg.meta.json (less than 1 KB, 4 minutes ago)
 - AF1FCA9F-56E1-4263-A981-D703D3486A07.jpeg (309 KB, 4 minutes ago)
 - AF1FCA9F-56E1-4263-A981-D703D3486A07.jpeg.meta.json (less than 1 KB, 4 minutes ago)
- Total:** 1 folder and 8 files, 2 MB total size.

Useful Settings!

Why Now?

We are at a pivotal moment in media history, specifically internet history, where previously marginalized communities have a chance to document, preserve, and amplify their stories. Until now, history has been written by the victors. Now that it's being recorded by the masses, we must protect it.

Archiving & accessibility bolsters many areas of human rights practice: from evidentiary use in criminal courts to public awareness about threats to civil society.

Footage of the Rodney King beating is one of many examples of how powerful this media is to grow public awareness around everyday injustices and structural inequality.

Citizen journalism is currently far more pervasive on YouTube than corporate media. However, despite its ubiquity, there was no mobile application to **authenticate** and **securely archive** this media in a public trust.

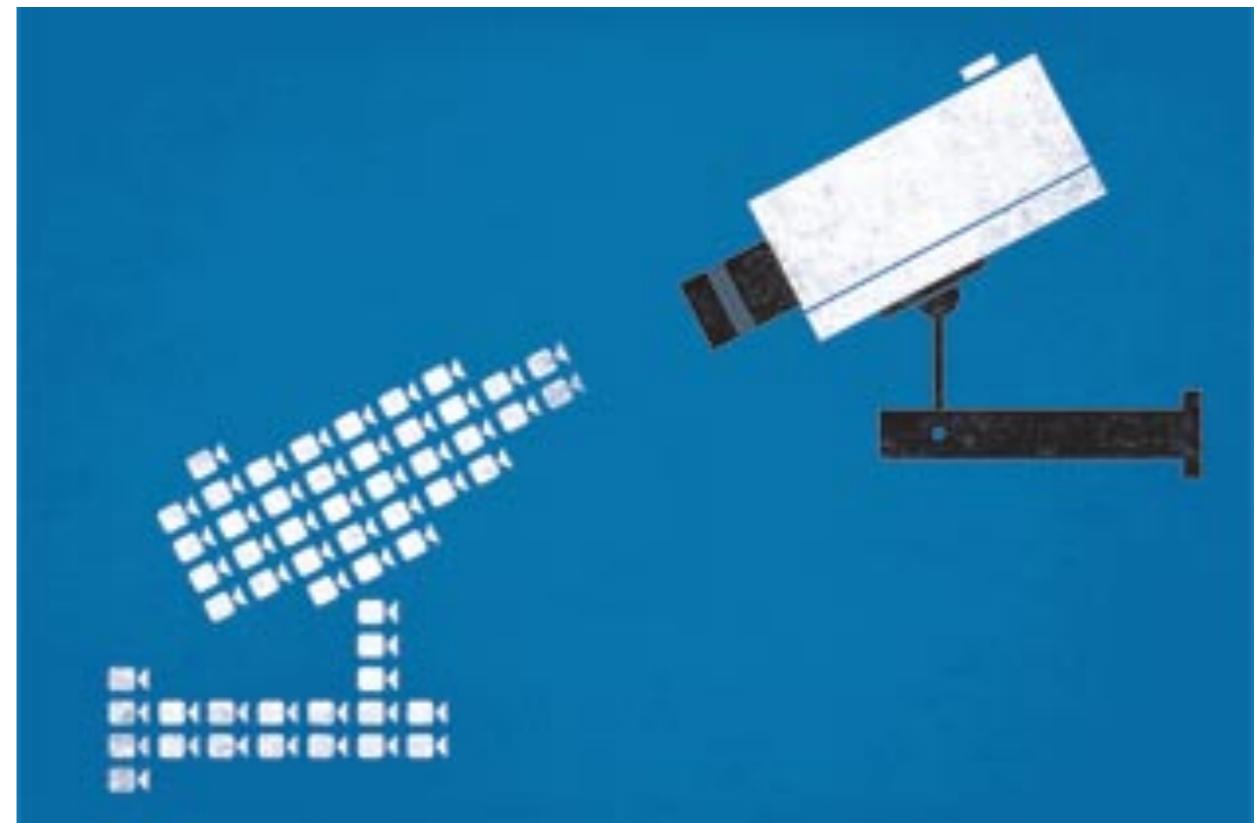

Why do we need Save?

Born-digital mobile media is particularly **fragile**:

- **Locally:** phone confiscation or destruction
- **In-transit:** information can be intercepted
- **Remote:** corporate platforms can chill free speech by: revealing user identities, modifying metadata, and taking down / censoring content for political, economic, and other reasons.

People are **targeted**:

- By repressive actors online and off

“Open Source Research” can be **unethical & inaccurate**.

- It exposes identities of documentarians
- Scraps media and metadata that has been modified

Social media platforms have no commitment to preservation or human rights and are susceptible to takedowns, censorship, surveillance, and being blocked by oppressive actors.

When YouTube Removes Violent Videos, It Impedes Justice

Opinion: Violent footage uploaded from conflict zones can be crucial for prosecuting war criminals.

Crucial documentation of human rights abuses is being deleted.
